

4.6 Trapezoid Rule

WCID? I can find area under a curve using trapezoids

A.

$$A = \frac{1}{2}(b_1 + b_2) \cdot h$$
$$= 25$$

$$\frac{b-a}{n}$$

$$\frac{b-a}{n} \cdot \frac{1}{2} (f(a) + f(b)) + \frac{b-a}{n} \cdot \frac{1}{2} (f(b) + f(c)) +$$

$$\frac{b-a}{n} \cdot \frac{1}{2} (f(c) + f(d)) + \frac{b-a}{n} \cdot \frac{1}{2} (f(d) + f(e))$$

$$\frac{b-a}{2n} [f(a) + 2f(b) + 2f(c) + 2f(d) + f(e)]$$

Ex. $\int_0^2 x^2 dx$, $n=4$, trapezoid Rule

$$\frac{b-a}{n} = \frac{2-0}{4}$$

$$= \frac{1}{2}$$

$$\begin{aligned} A_T &= \frac{1}{2} \cdot \frac{1}{2} \left[f(0) + 2f\left(\frac{1}{2}\right) + 2f\left(\frac{2}{2}\right) + 2f\left(\frac{3}{2}\right) + f(2) \right] \\ &= \frac{1}{4} \left[0 + 2\left(\frac{1}{4}\right) + 2(1) + 2\left(\frac{9}{4}\right) + 4 \right] \\ &= \frac{1}{4} \left[0 + \frac{1}{2} + 2 + 4.50 + 4 \right] \\ &= 11/4 \end{aligned}$$

$$\text{Ex. } \int_0^9 (x^2 + 1) dx \quad n=5$$

$$\left. \begin{array}{l} \frac{b-a}{n} = \frac{9-0}{5} = 1.8 \\ \text{nodes: } 0, 1.8, 3.6, 5.4, 7.2, 9 \end{array} \right\} \frac{1}{5} \cdot \frac{1}{2} \left[f(0) + 2f(1.8) + 2f(3.6) + 2f(5.4) + 2f(7.2) + f(9) \right]$$

$$\frac{1}{10} \left[1 + 2(1.04) + 2(1.16) + 2(1.36) + 2(1.64) + 2 \right]$$

$$= 1.34$$

P. 314
